Forward Deployed Engineer who **embeds with teams to ship AI systems that work in the real world**. I sit with founders and product teams, learn the domain firsthand, and turn messy requirements into deployed, integrated, and governed software. FDE-certified through Educative and currently completing an AI Governance certification, so the systems I ship stay monitored, explainable, and accountable after launch.

HOW I APPROACH EVERY PROBLEM

1

Embed & observe. Go to where the problem actually lives. Watch the real workflow and talk to real users before writing a line of code.

2

Frame the thinnest slice. Define the smallest thing that delivers real value and can ship this week, then expand from evidence — not assumptions.

3

Integrate deeply. Wire into the customer's real data, auth, APIs, and tools so the solution survives production, not just the demo.

4

Keep a human in the loop. Design approvals, fallbacks, and review steps so AI accelerates people without ever removing accountability.

5

Govern & hand over. Add evals, monitoring, and audit logs; write runbooks and docs so it stays safe and the team can own it without me.

6

Iterate in the open. Over-communicate, ship weekly, measure against real outcomes, and close the loop with the people who use it.

CORE CAPABILITIES

AI Engineering & Governance

LLM & agent orchestration RAG
Prompt engineering Model evaluation
Human-in-the-loop Monitoring & drift Guardrails
Audit & docs

Data & Integration

Python SQL API integration Data pipelines
PostgreSQL Supabase Power BI Webhooks

Deployment & Delivery

Next.js TypeScript Prototyping Netlify / Vercel
Runbooks Prod debugging Observability

Embedded Collaboration

Customer discovery Requirements
Stakeholder comms Technical translation
Demos & enablement

CERTIFICATIONS

Forward Deployed Engineer **CERTIFIED**
Educative · Specialized Track

AI Governance **IN PROGRESS**
Responsible AI & AI Governance · expected 2026

Google IT Support
Professional Certificate

LET'S TALK

I'm actively looking for **Forward Deployed Engineer** and **AI governance** work — and deliberately reaching out to more people to sharpen my communication. If you're building something hard, I'd love a conversation.

EXPERIENCE

Forward Deployed Engineer (Freelance) 2024 – Present
Seed-Stage AI Startup · client confidential

- Embedded with a small founding team to take an AI product from prototype to production inside real customer environments
- Built and integrated LLM-powered workflows against the customer's live data, auth, and internal tools, replacing brittle manual processes
- Instrumented evaluations, logging, and human-in-the-loop review so the deployed system stayed accurate, safe, and auditable
- Ran weekly feedback loops with end users and wrote architecture docs, runbooks, and governance controls for team handover

Business Data Analyst Aug 2024 – Present
Augmentare Inc.

- Deploy internal data tooling, dashboards, and reporting pipelines that put operational insight in front of decision-makers
- Automated recurring reporting workflows, improving reporting efficiency by 28%**
- Integrate data across business and technical systems; translate findings into executive-ready reports

AI Evaluation & Governance Specialist Freelance
Outlier AI

- Reviewed 1,800+ model responses and documented 30+ recurring failure modes as structured, actionable feedback**
- Evaluated AI outputs for factual accuracy, safety, reasoning, and instruction following — the judgment behind responsible AI governance
- Supported human-in-the-loop review workflows that keep AI systems accountable and audit-ready

Data Analyst Jun 2020 – Jan 2023
VN Technologies

- Built recurring dashboards and data pipelines that reduced analysis turnaround by 30%**
- Partnered with cross-functional stakeholders to gather requirements, resolve inconsistencies, and manage revisions

SELECTED FDE CASE STUDIES — client & customer withheld under NDA

FORWARD DEPLOYED · AI IN PRODUCTION
Embedded Support Copilot

Shipped an AI support copilot into a seed-stage startup's live workflow — from demo to daily-relied-on system.

- **First-response time cut ~60% on covered ticket types · ~45% of routine tickets resolved with copilot-drafted answers · prototype → production in under 4 weeks**
- Grounded, cited answers from the live knowledge base; human approval before customer-facing sends; full interaction logging for audit

FORWARD DEPLOYED · DATA INTEGRATION

Production Data & Ops Pipeline

Replaced a fragile spreadsheet reporting ritual with a deployed pipeline and real-time operations dashboard.

- **~20 analyst-hours/week of manual reporting eliminated · weekly → near real-time · 99.5% pipeline uptime**
- Automated ingestion and reconciliation across four live sources with alerting; runbooks for team self-service ownership

FORWARD DEPLOYED · AGENT AUTOMATION

Customer Onboarding Agent

Human-in-the-loop agent that guided each new customer through setup and unblocked the founding team.

- **Onboarding time cut from ~3 weeks to ~4 days · founder freed from ~90% of manual steps · zero irreversible actions without human approval**
- Guided, validated flow integrated with product provisioning APIs; ambiguity escalated to a human with full context

FDE × AI GOVERNANCE PROJECTS

GovSeal — Deployment Governance Console

A console that sits on top of deployed AI: continuous evaluation runs, drift & quality monitoring, a human-approval workflow for changes, and a tamper-evident audit log — so the team that ships a model can prove it's still behaving.

TraceGrid — LLM Evaluation & Audit Platform

Captures the full trace of every response (input, prompt version, context, model, output), scores it for factuality, safety, bias, and policy, and feeds failing cases to a red-team and human-review queue — making AI behavior legible and contestable.
